LipLase[®]

Non-invasive plumping for
fuller lips without injectables

What is LipLase®?

Do you crave having fuller lips but dislike needles?

LipLase® is an exciting new laser treatment that **plumps your lips** and **defines their shape** in a **safe and non-invasive** way.

How does it work?

Unlike using injectable fillers, LipLase® involves no artificial substances, only mild laser energy to stimulate the process of collagen remodeling.

With LipLase® you can achieve key characteristics of 'ideal lips', such as greater volume combined with an optimal balance between the upper and lower lip and a well-defined vermillion border, painlessly and naturally.

Key advantages of LipLase®

- Immediate response
- No needles, no downtime
- Safe and non-invasive
- Stimulates collagen remodeling

What is the treatment like?

LipLase® is a short, **non-surgical and non-invasive** procedure, requiring only 10-15 minutes, allowing you to resume your normal daily activities **immediately** after the treatment. It causes minimal discomfort and provides **natural-looking** results by stimulating production of new collagen in the lips.
